1 Introduction

This chapter introduces the target of this work, which is to design, implement and evaluate an educational app which is supposed to teach unexperienced people to detect phishing attacks. At first we are going to motivate the benefit of our work and how we envision our approach to achieve our goal. Next, we define our specific objectives and point out the major challenges security education poses. Finally, we provide an overview of the following chapters.

1.1 Motivation

1.1.1 Statistics

1.1.2 Consequences

1.1.3 Technical Solutions

1.1.4 Anti-Phishing Education on the Smartphone

1.2 Goals

We begin with stating our primary goals of this thesis and describe them in more depth subsequently. The goals of this thesis are to extend, not replace, the technical solutions by

1. Increasing the user awareness
2. Educating the user
3. ...

Goal description ...

1.3 Our Approach

In the succeeding, we elaborate on how we are going to approach the challenges mentioned before. The reasoning for our approach follows in Section 3.4.

...

1.4 Outline

This thesis consists of ... main chapters: Their purpose is as follows:

Chapter 1 motivates this work...

Chapter 2 ...

Chapter 3 ...

...

Chapter ... finally summarizes this work and provides an outlook on future work.

2 Background

Introducing sentences...

2.1 Definition of Phishing

Our goal is to educate users to detect phishing websites. Since phishing is important in our work, we are going to define our understanding of the term.

“Definition of Phishing”

The next section dwells on different phishing types.

2.2 Phishing Techniques

In this section we are going to describe the different phishing techniques that are distinguished in literature. Furthermore we state and reason which technique(s) of phishing we focus on in our work.. Phishing techniques include, but are not limited to:

Deceptive Phishing

Malware Based Phishing (including keyloggers and screenloggers)

Host File Poisoning

DNS Based Phishing (Pharming)

Man-in-the-Middle Phishing

For our research, we focus on deceptive phishing...

2.3 Phishing Attack Channels

E-Mail

SMS

Instant Messaging

Online Social Networks

Fake Website

VoIP

Malicious Downloads

We focus on fake websites. Usually, the links to fake websites are distributed via e-mails, SMS, instant messengers or online social networks, Thus, our approach automatically covers the attack channels e-mail, sms, instant messaging and online social networks.

2.4 Variations of Phishing

Do we need this subsection?

Mass Phishing

Spear Phishing

Persistent Spear Phishing

Clone Phishing

Whaling

We cover in particular mass phishing. However, the URL checking can be applied in case of any variant, as long as the attack is executed via a fake website.

2.5 Summary - Phishing in this Work

3 Related Work

In the following, we present a survey of approaches to anti-phishing education.... We divided the related work we have found in literature into two dimensions: the *communicated content* way of communication

3.1 Communicated Content
General Knowledge Transfer
E-Mail Based Knowledge
URL Based Knowledge
3.2 Way of Communication
Game Based Learning
Quiz Based Learning
Comparison Based Learning
Emdedded Learning
3.3 State of the Art
Examples here ... (e.g. Anti-Phishing Phil and Phyllis)
3.4 Pro and Contra Discussion
4 System Requirements, Assumptions and Limitations
Introductory sentences...
4.1 System Requirements
Android OS
Version
Android Standard Browser (transfer of knowledge to other browsers possible)
4.2 Assumptions
Secure DNS ...
Secure Smartphone ...
No Before-Click URL Analysis ...
Download URLs Possible ...
4.3 Limitations of Our Approach
Cross-Site Scripting ...
URL Hiding Techniques ...
5 Target Group
Introductory sentences... DIVSI
6 Pre-Survey
Introductory sentences...

6.1 Main Objective

6.2 Survey Details

6.3 Evaluation

7 Teaching and Learning Content

In this section we will describe and elaborate on different teaching and learning contents which can potentially be communicated to the user. At the same time we will reason our decision whether to communicate the specific content or not.

7.1 Phishing URLs

Focus on distinguishing phishing URLs from legitimate ones.

7.1.1 Phishing URL Categorization

Potential phishing URL categories/phishing attacks on URLs

Subdomain covered

IP Address covered

Nonsense Domain covered

Trustworthy, But Unrelated Domain covered

Similar and Deceptive Domains covered Typo, Typosquatting (Buchstabendreher), Misspelling

Homographic Attack covered (the type of homographic visible by user...)

Tiny URLs Not covered

Cloaked URLs Not covered - because redirect (use of @)

Encoding Tricks Not covered - because redirect

7.1.2 Problems and Challenges With The Categorization

7.2 Android Elements

Invisible Address Bar Find URL Bar, Browser

Use of Https Within Websites Browser

Analyze Complete URL Via Address Bar Browser

Show URL Before Click In E-Mail (not always possible), while surfing (long touch)

Copy and Paste URL too much effort, additionally: redirects still possible

7.3 Android Browser Security Indicators

Https Padlock Browser

Displayed Webaddress on Https Sites Browser

Certificate Verification

Touch Padlock to see whole URL.. problems: see document...

7.4 E-Mail Spoofing

From Field not trustworthy

E-Mail Content in hand of attacker

Links in E-Mails do not necessarily go where it claims to go (not only in e-mail links).

7.4.1 General Recommended Behavior

Do Not Click

Do Not Download Attachment

Look at URL

Data Economy

Date Entry Via Https

7.5 Conclusion / Summary

Summarize what to communicate to user here...

8 Approach for Our Anti-Phishing Education App

This chapter presents our final approach for the Anti-Phishing Education App....

8.1 App Design

1. Awareness Part

- a) From is not from...
- b) Linktext unequal actual target URL

2. Education Part

- a) Information Material
- b) Exercise to Information Material
- c) Repeat 2.1 and 2.2 with increasing difficulty

8.2 Game Rules

8.3 Leveling Strategy

Three approaches...

8.4 Knowledge Transfer Per Level

What is taught in each level ...

8.5 URL Generation

8.6 Gamification

User motivation

Show Leaderboard Rate

Show Leaderboard Total

...

9 Evaluation

The goal of this chapter is to evaluate our Anti-Phishing Education App which we described in the previous chapter.

9.1 Hypotheses

9.2 Measurement

9.3 User Recruitment

9.4 Study Design

9.5 Results and Discussion

9.6 Conclusion

10 Conclusion and Outlook

This chapter provides a short summary of what we achieved in the scope of this thesis and presents an outlook on future work.

10.1 Conclusion

The objectives of this thesis...

10.2 Outlook

This section deals with a prospect on future work for our Anti-Phishing Education App. In particular, we present ideas that might be beneficial and which we were not able to realize due to time and resource limitations.
